

Key Features

Simplifies configuration

Reduces installation

Intuitive system creation tools

Real-time diagnosis

Compliant reporting

Overview

The Wi-Fyre Xenos Programming Software (XPS) offers an intuitive and straightforward tool for setting up the Xenos system. With a user-friendly interface, it streamlines configuration, reduces installation time, and provides a clear system overview for convenient maintenance.

Using XPS, users can create a virtual system with a virtual warehouse for swift setup. Each Wi-Fyre Xenos device is equipped with QR codes, facilitating easy scanning into the XPS software. Devices can be effortlessly dragged and dropped from the virtual warehouse onto floor plans. XPS then calculates optimal routes for the fire alarm signal, ensuring accurate designs.
