

Key Features

Generates detailed reports

Scans signal strength

Facilitates easy design

Aids compliance

Manage all locations

Overview

The Xenos Wireless Survey App, when paired with the Wi-Fyre Xenos Survey Kit, streamlines the process of conducting accurate surveys and generating comprehensive reports for compliance and design purposes. With this app, users can effortlessly devise a system plan containing detailed insights into device placement preferences, device types, and capture notes and photos of device locations.

Utilising the app, users can scan the wireless signals between devices, receiving clear indications of the results categorized as good, marginal, or bad. Subsequently, the surveyor has the capability to produce in-depth reports, incorporating all the aforementioned information, and can easily download and email the finalized report.

Additionally, the app provides users with the functionality to oversee their entire portfolio of sites and surveys, enhancing overall management capabilities.
